

Renfrew Wastewater System

2021 Annual Report

January 1, 2021 – December 31, 2021

Prepared By

**Ontario Clean Water Agency
Agence Ontarienne Des Eaux**

This report has been prepared to meet the requirements set out in the facility Environmental Compliance Certificate #4237-ACPJ6Y issued October 13, 2016.

Compliance Report Card

Compliance Event	# of Events	Details
Ministry of Environment Inspections	0	No Inspections during the reporting period
Ministry of Labour Inspections	0	No Inspections during the reporting period
Effluent Parameter Exceedances	0	No parameter was exceeded during the reporting period
Non-Compliance	0	No Non-Compliance during the reporting period
Bypass/Overflows	1	See summary of Bypass/Overflows
Community Complaints	0	No community complaints during the reporting period
Spills	0	No spills during the reporting period

System/Process Description

Wastewater enters the Water Pollution Control Plant (WPCP) through two influent channels, one equipped with a mechanical screen and one with a manual bar screen for maintenance and emergency bypass. The screening system is equipped with one screenings washer/compactor. Influent then enters two aerated grit tanks, utilizing automated blowers to provide aeration. Two grit slurry pumps, two grit cyclones, and one grit classifier/dewatering unit transport and process particulate material.

Biological treatment is provided using two (2) three-pass aeration tanks with fine bubble aeration systems and one anoxic intake zone. Flow is then directed to two (2), two-pass secondary clarifiers equipped with sludge and scum removal mechanisms. Phosphorus is removed and controlled in the effluent by the use of a settling agent called Ferric Chloride which is introduced at the beginning of the aeration process.

Disinfection of final effluent is achieved via ultraviolet (UV) light disinfection. The UV bulbs are cleaned via automated wipers.

Sludge digestion occurs via aerobic digestion. Digested sludge is dewatered via one centrifuge and back-up system dewatering press. Polymers are added to aid in dewatering. The dewatered cake is conveyed into a Town-owned dump truck and hauled to the local landfill. There are no sludge storage facilities onsite at Renfrew WPCP.

The facility is equipped with back-up power.

An on-site tank and chopper pump are available for receiving imported wastewaters.

Effluent Quality Assurance or Control Measures

The Town of Renfrew facilities are part of OCWA's operational Mississippi Cluster. The facilities are supported by regional and corporate resources. Operational Services are delivered by OCWA staff that live and work in the community.

OCWA operates facilities in compliance with applicable regulations. The facility has comprehensive manuals detailing operations, maintenance, instrumentation, and emergency procedures. All procedures are treated as active documents, with annual reviews.

OCWA has additional “Value Added” and operational support services that the Town of Renfrew benefits from including:

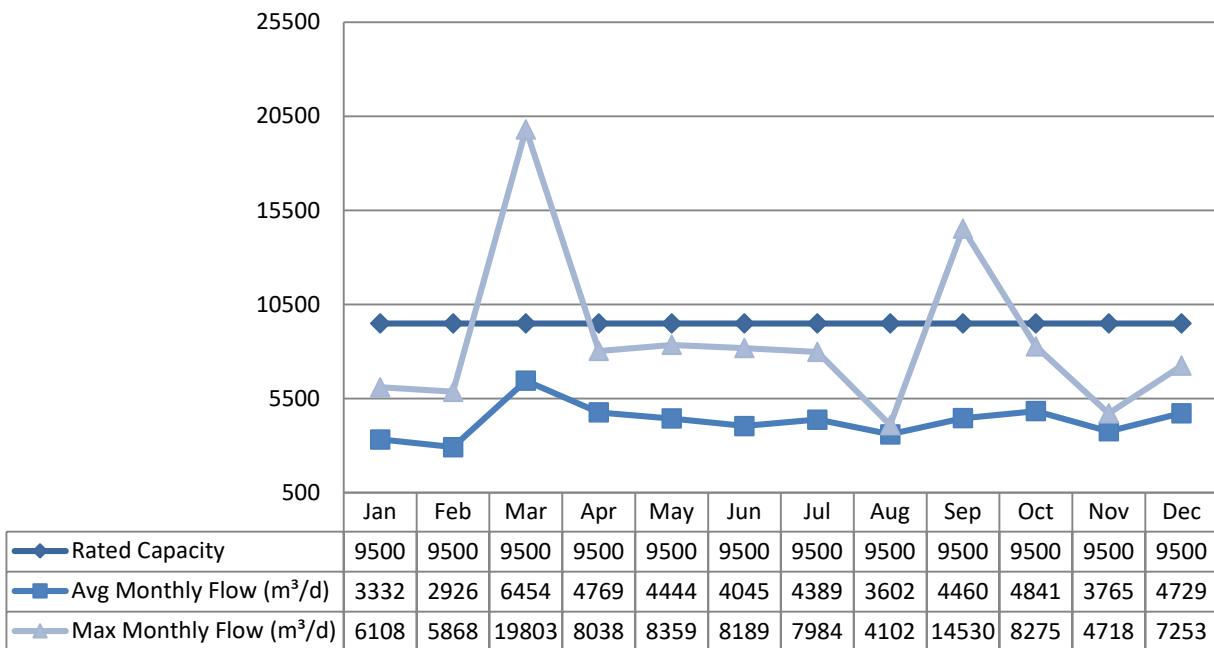

- Access to a network of operational compliance and support experts at the regional and corporate level, as well as affiliated programs that include the following:
- Quality & Environmental Management System, Occupational Health & Safety System and an internal compliance audit system.
- Process Data Management (PDM) facility operating information repository, which consolidates field data, online instrumentation, and electronic receipt of lab test results for reporting, tracking and analysis.
- Work Management System (WMS) that tracks and reports maintenance activity, and creates predictive and preventative reports.
- Outpost 5 wide-area SCADA system allows for process optimization and data logging, process trending, remote alarming and optimization of staff time.
- Client reporting which includes operational data, equipment inventory, financial statements, maintenance work orders, and capital status reports
- Site-Specific Contingency Plans and Standard Operating Procedures
- Use of accredited laboratories
- Additional support in response to unusual circumstances, and extra support in an emergency.
- Use of sampling schedules for external laboratory sampling

Treatment Flows

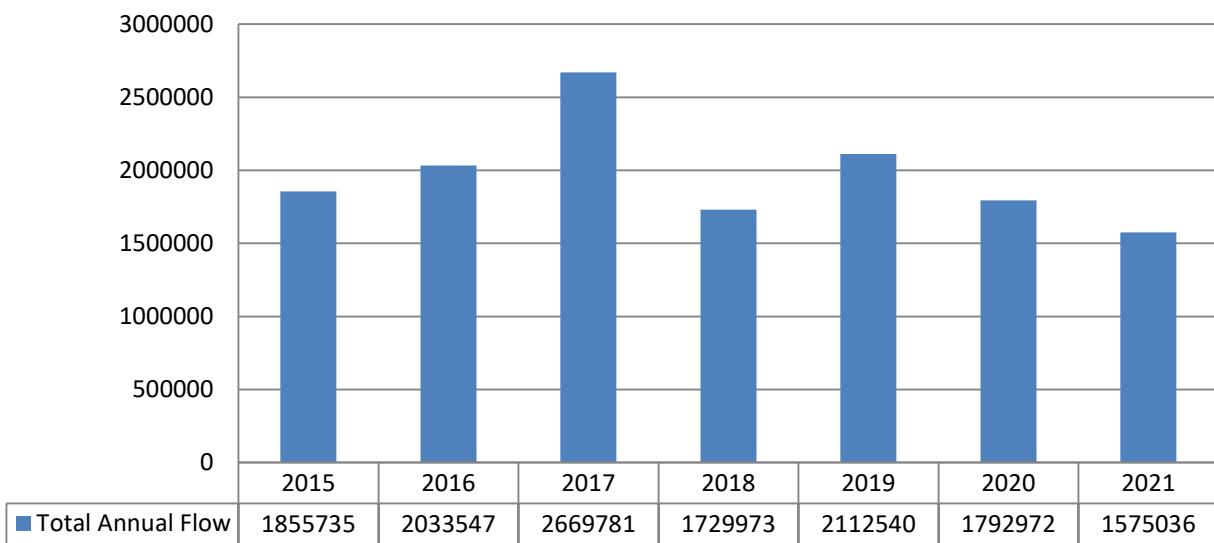

Raw Flow (m³/d)

Compliance is based on an annual average flow. For 2021, the annual average flow was 4313 m³/d, which is compliance with the 9500 m³/d.

Note: Elevated flows above the rated capacity are directly related to snow melt and wet weather events.

Annual Comparison (m³)

Raw Sewage Quality

Results of raw sewage concentrations are available in the Facility Performance Assessment Report in Appendix A. A monthly loading summary is available in Appendix B.

Annual Average Loading Objectives

Parameter	Annual Average (kg/d)	Objective (kg/d)	Status
BOD5	628	712	Met Objective
Total Suspended Solids	15	801	Met Objective
Total Phosphorus	0.302	22	Met Objective
Total Kjeldahl Nitrogen (TKN)	1.41	125	Met Objective

Effluent Quality

The limits are based on current requirements in the facilities Environmental Compliance Approval. Laboratory samples are submitted to an accredited laboratory for regulatory analysis.

The Federal Government also regulates certain sewage effluent parameter under the Federal Fisheries Act. The results are submitted to Environment Canada on a quarterly basis.

Effluent Exceedance Summary

Limit

Sample	Date	Parameter	Exceedance of	Limit	Value
No limit exceedances during the reporting period					

Objective

Sample	Date	Parameter	Objective	Value
No objective exceedances during the reporting period				

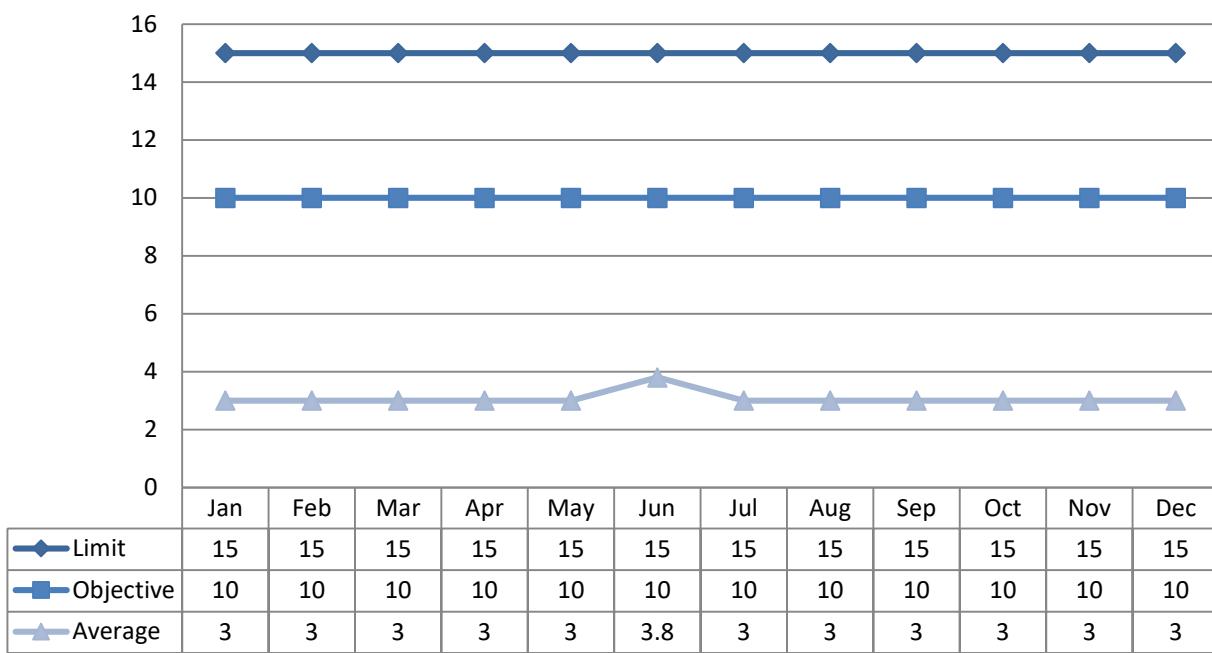

Other Effluent Issues

Sample	Legislation	Date	Details	Response
There were no other operational issues affecting effluent quality				

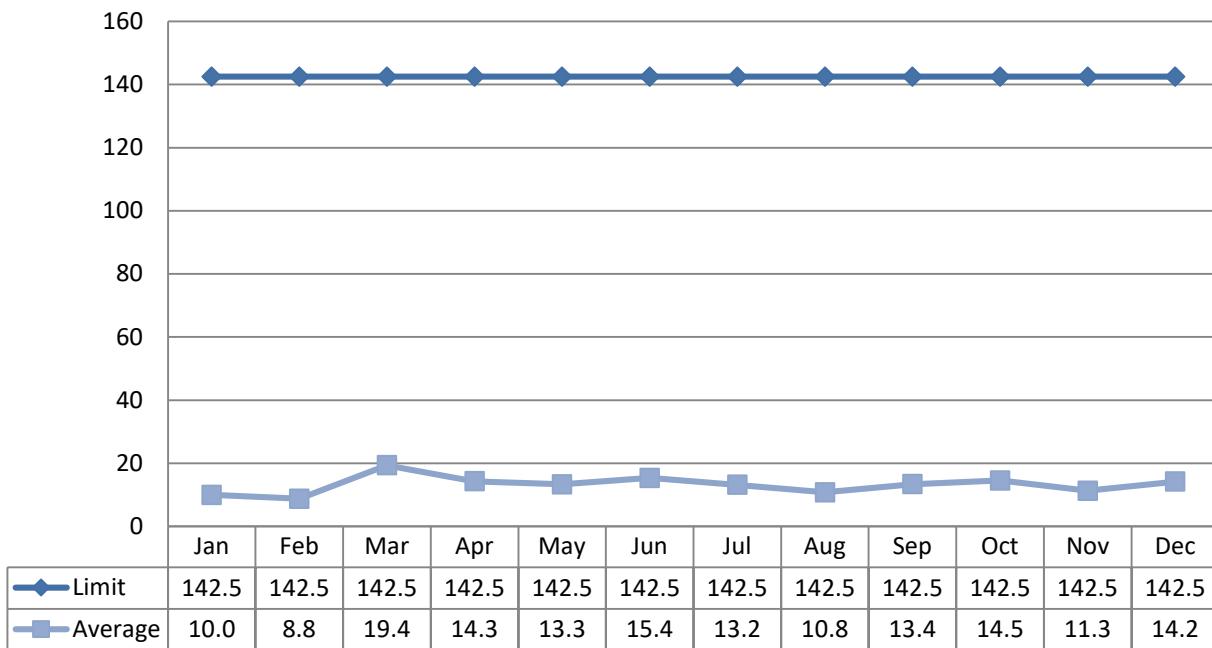

Effluent Parameter Summary

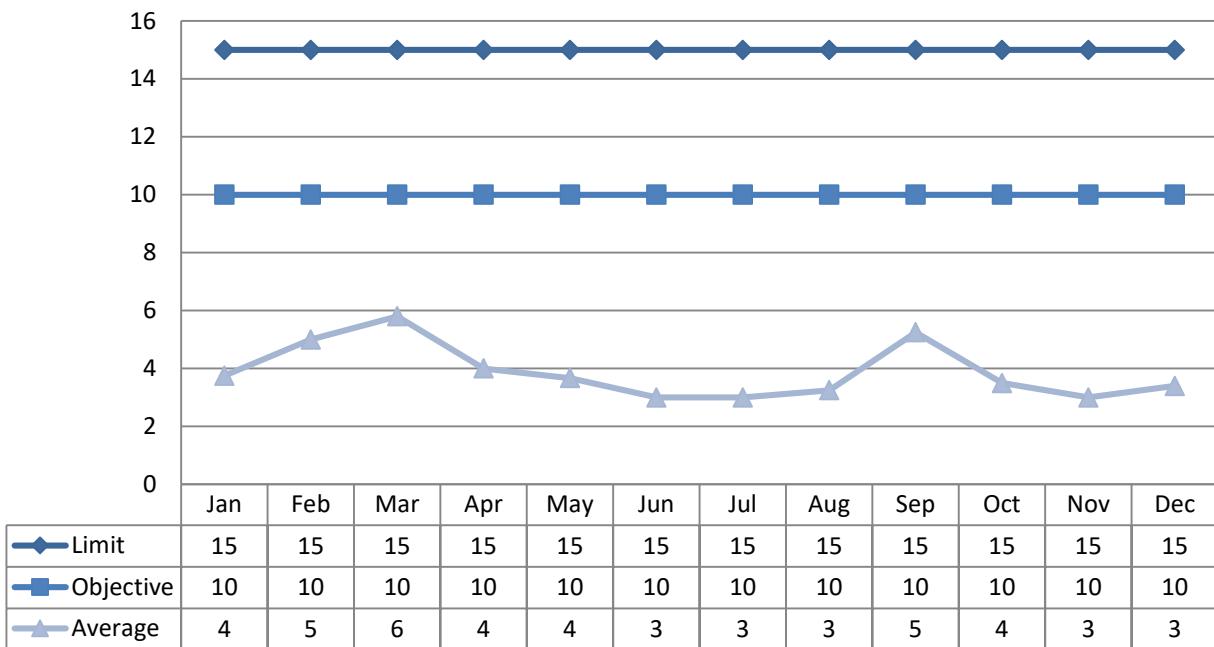

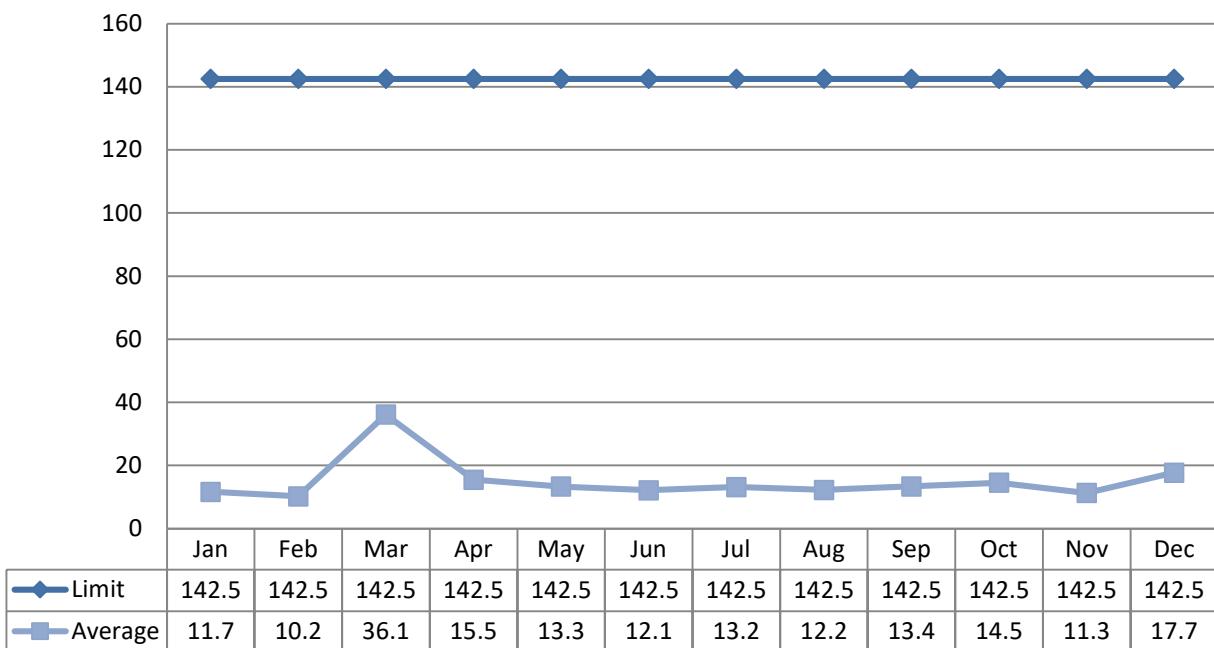

Carbonaceous Biological Oxygen Demand (CBOD5)

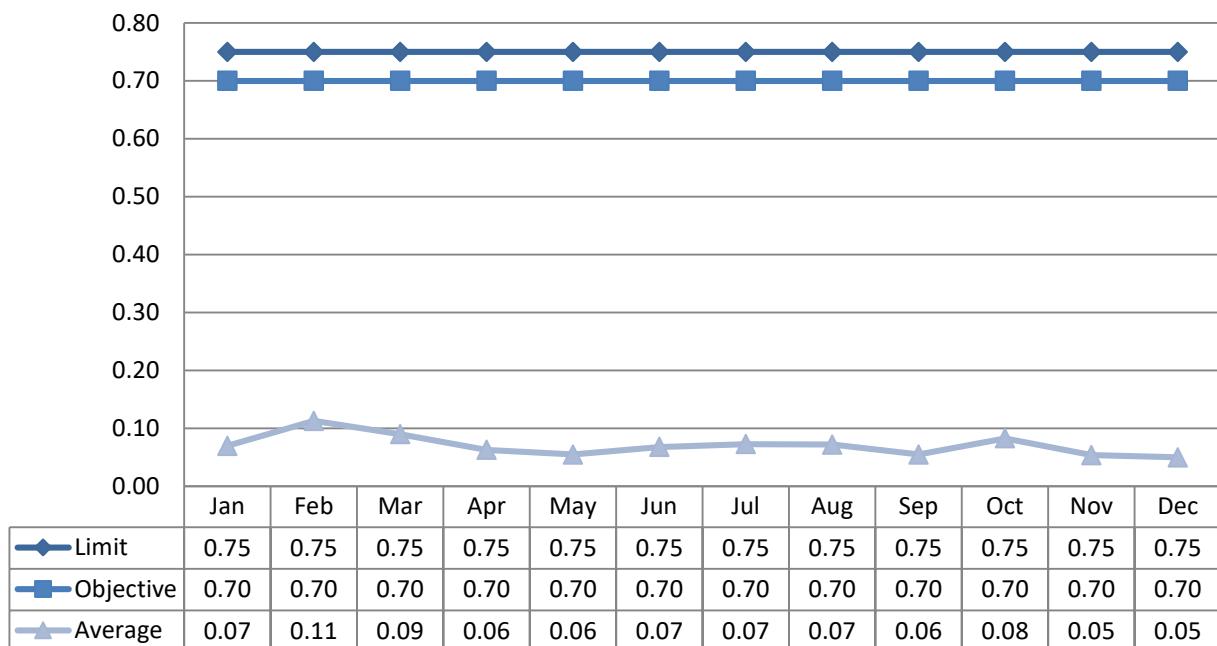

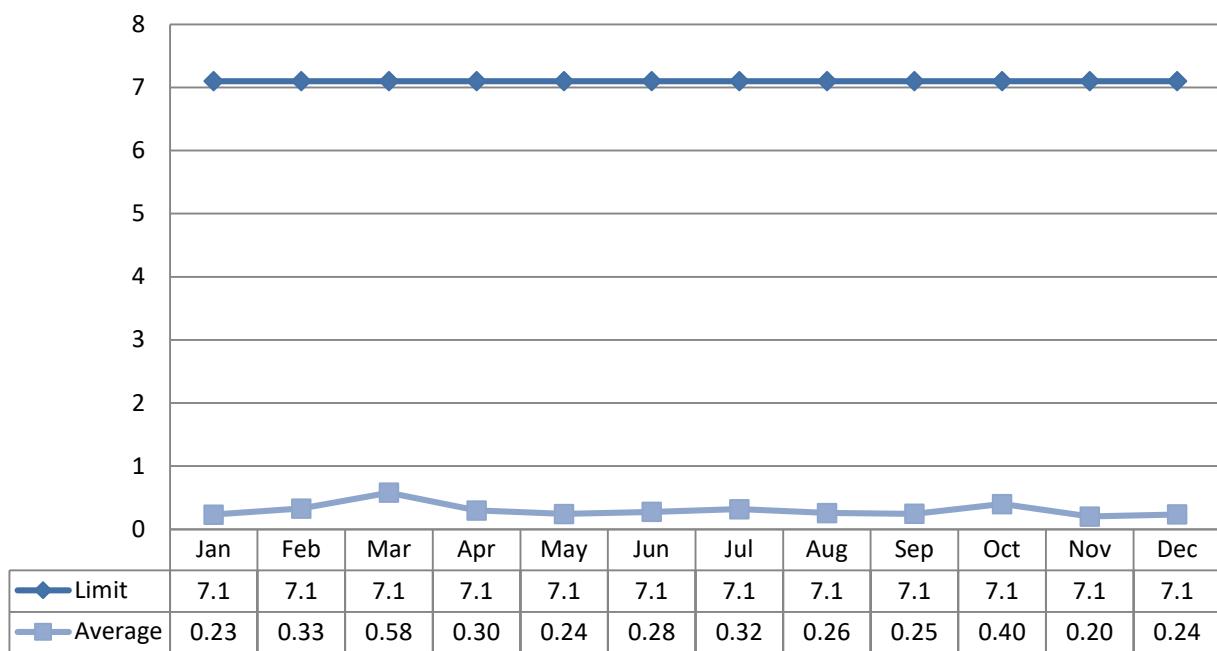

Concentration (mg/L)

Loading (kg/d)

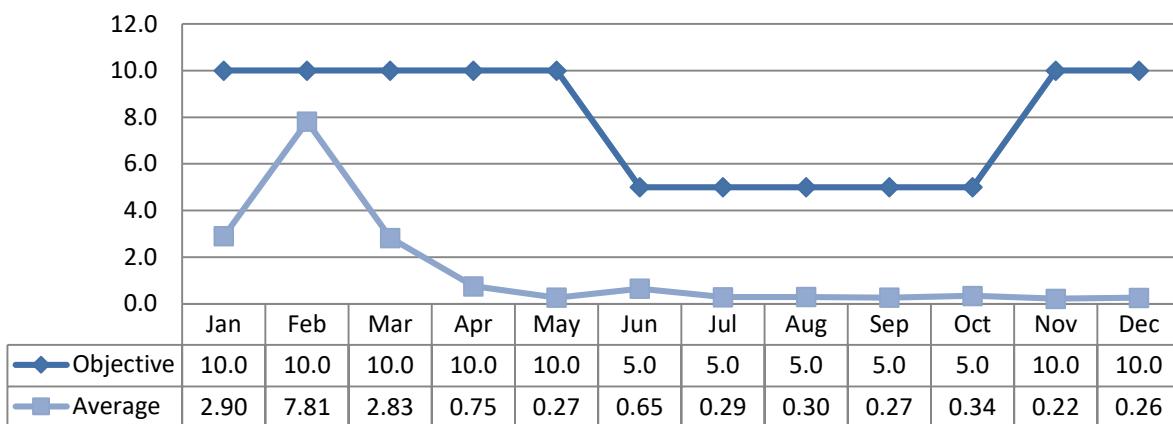

Total Suspended SolidsConcentration (mg/L)Loading (kg/d)

Total Phosphorus**Concentration (mg/L)****Loading (kg/d)**

Ammonia Nitrogen Series

There are no limits regarding ammonia concentration or loading. Compliance is based on acute lethality.

Total Ammonia Nitrogen Concentration (mg/L)

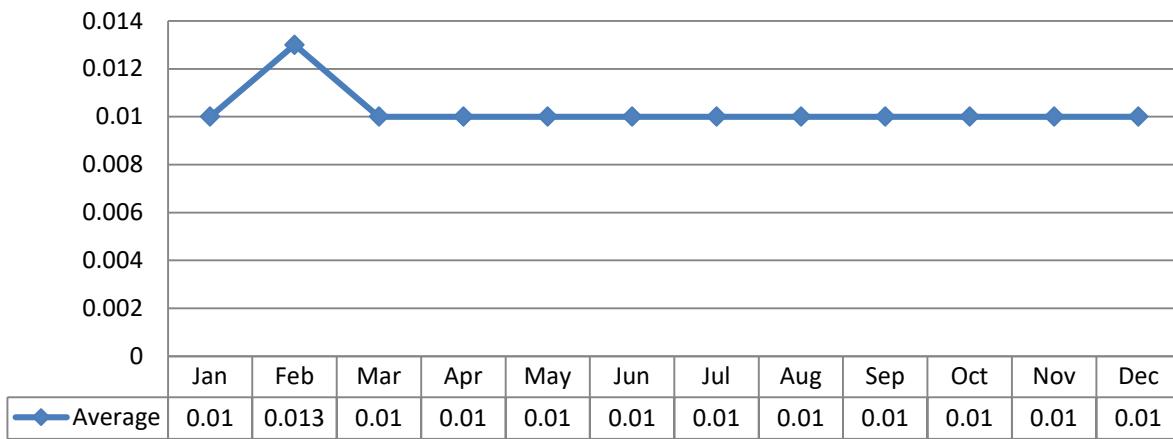

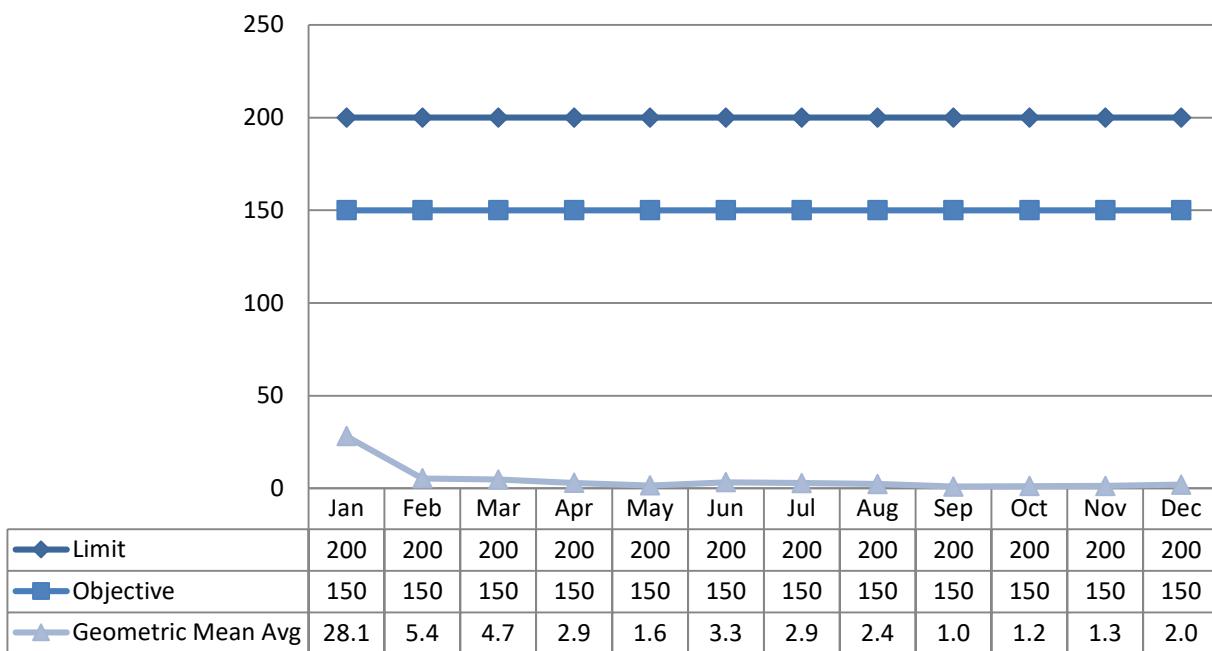

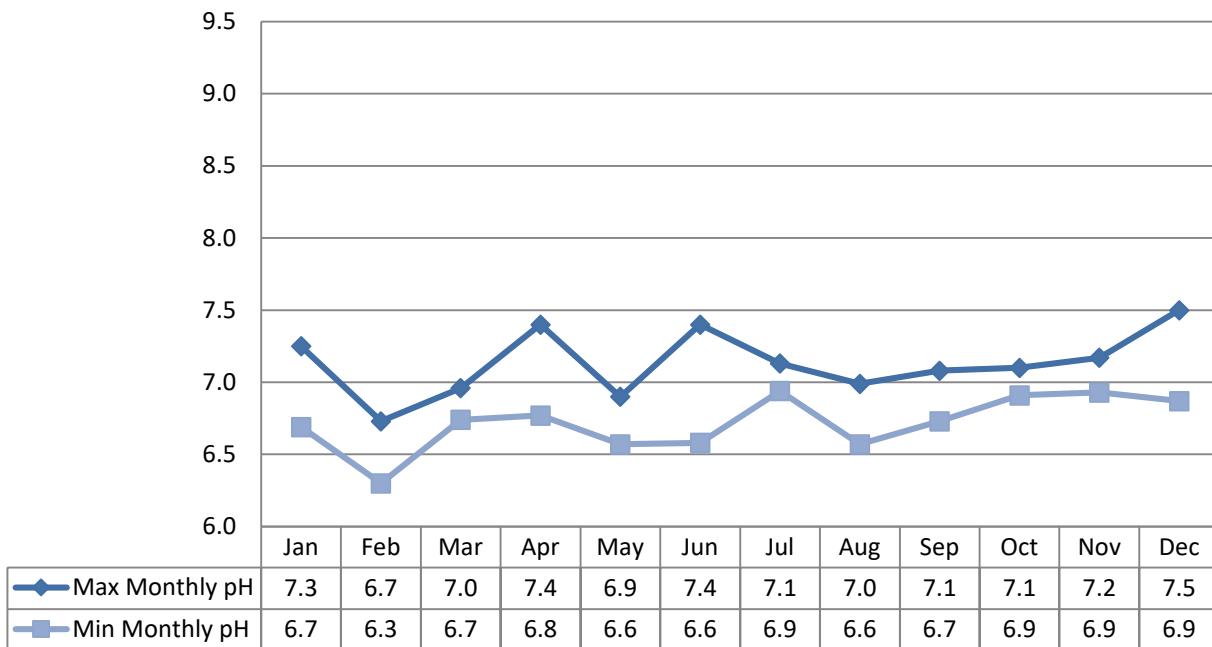

Acute Lethality

There were four (4) samples collected in 2021 and tested for acute lethality (Rainbow Trout and Daphnia Magna). Results are displayed as % mortality. Sampling has changed from annually to quarterly after the issue of the amended Environmental.

Quarter	Rainbow Trout	Daphnia Magna
1 st Quarter	0%	0%
2 nd Quarter	0%	0%
3 rd Quarter	0%	0%
4 th Quarter	0%	0%

Un-Ionized Ammonia

E-coli**Geometric Mean Average (cfu/100mL)****pH**

Imported Wastewater Quality

There were no imported wastewaters accepted into the treatment plant.

Biosolids

Please note Section 10.4 (g) of Environmental Compliance Approval 4237-ACPJ6Y asks to include discussion on lagoon cells. The Renfrew Wastewater Treatment facility does not utilize a lagoon process.

The Renfrew WPCP uses aerobic sludge digestion followed by sludge dewatering. Dewatering is completed using either centrifuge or Fournier press. The dewatered sludge was hauled off site to the local land fill.

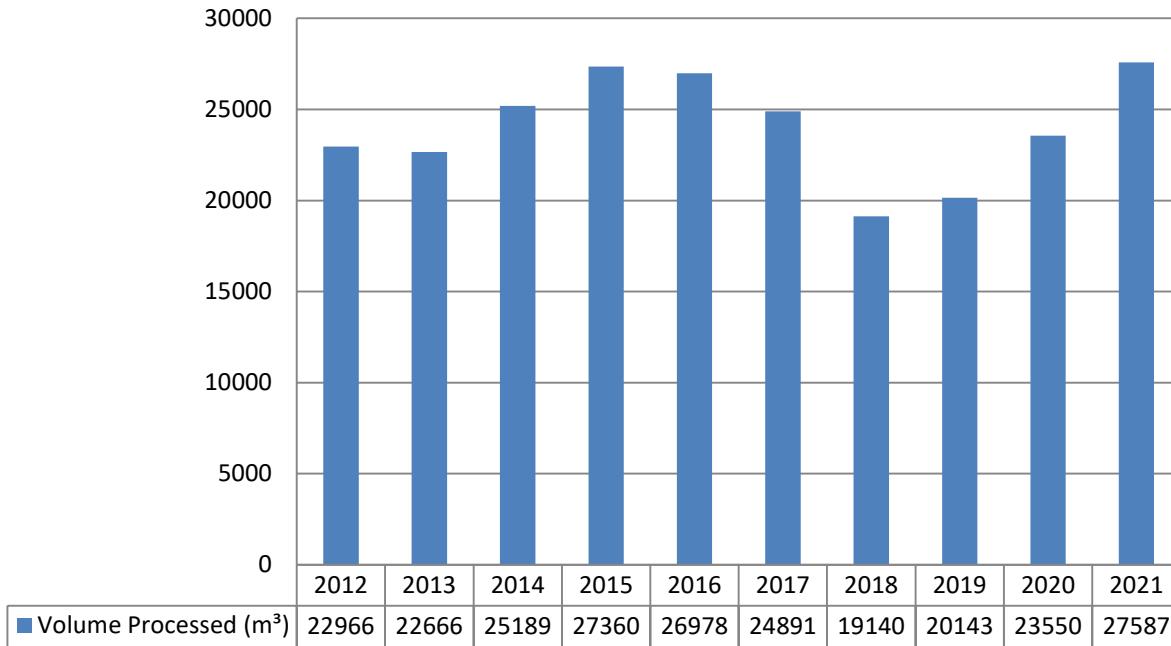

Centrifuge

Approximately 27,587 m³ of liquid sludge was processed in 2021.

Fournier Press

The Fournier Press was not utilized in 2021.

Annual Comparison

Quality

The biosolids sampling results are summarized in Appendix C. All results met the established guidelines.

Summary of Complaints

Date	Location	Details	Corrective Action Taken
There were no complaints received during the reporting period.			

Summary of Bypass/Overflows

Start Date	End Date	Details	Actions Taken	Volume (m³)
July 20 2021	July 20 2021	Heavy rainfall hydraulically overloaded the facility	Samples taken	20.5

Summary of Spills/Abnormal Discharges

Date Start	Date End	Details	Corrective Action
There were no spills or abnormal discharges during the reporting period.			

Maintenance

OCWA uses a risk-based preventative maintenance framework that ensures assets are maintained to manufacturer's and/or industry standards. Maintenance is completed using various tools and operational supports. The Ottawa Valley Hub has specialized certified staff such as Millwrights, Electricians and Instrumentation Specialists to name a few.

OCWA uses a Workplace Maintenance System (WMS). WMS is a maintenance tracking system that can generate work orders as well as give summaries of completed and scheduled work. During the year, the operating authority at the facility generates scheduled work orders on a weekly, monthly and annual basis. The service work is recorded in the work order history. This ensures routine and preventive maintenance is carried out. Emergency and capital repair maintenance is completed and added to the system.

Capital projects are listed and provided to the Town of Renfrew in the form of a "Capital Forecast". This list is developed by facility staff and provides recommendations for facility components requiring upgrading or improvement.

Maintenance Highlights

WO #	Summary
2132148	Capital Exhaust Fan Motor
2176770	Capital Centrifuge rebuild kits
2178096	Capital UV wipers and sensors

WO #	Summary
2090875	Capital Repair poly metering pump shaft
2092253	Capital Polymer 1 system
2093309	Capital Exhaust Fan Head works
2093496	Capital Fan motor 5 hp ferric room
2130785	Capital Ferric pulsation dampener Bladder
2173334	Capital Polymer 1 motor bearings
2270832	Capital Lights/ballast
2271342	Capital Repair door lock
2364030	Capital WAS 1 VFD Failure
2405784	Capital WAS Pump 1 Motor Replacement
2175850	Capital Wall Hydrant repair
2176766	Capital Clarifier chain tensioners
2176775	Capital UV level sensors
2176779	Capital Odor control system Canister replacement
2177949	Capital Centrifuge gearbox failure
2223402	Capital Polymer System/Ras Pump/Centrifuge Run Alarm
2225662	Capital Compactor emergency repair
2267350	Capital Boiler service Bruce Mechanical
2270746	Capital Spill containment units
2270830	Capital Boiler Pressure Switch
2362005	Capital Centrifuge Back drive VFD Issues
2362282	Capital MUA and exhaust fan for electrical room
2406411	Capital pH electrode replacement
2503248	Capital Eaton 9000 VFD Repair
2504247	Capital Outdoor wall pack lighting rear building
2540905	Capital Compactor Full repair

Submitted Notice of Modifications to Sewage Works

There were no notices submitted for 2021.

Appendix C

Biosolids Quality

Ontario Clean Water Agency
 Biosolids Quality Report - Liquid
 Digestor Type: AEROBIC
Solids and Nutrients

Facility: RENFREW WASTEWATER TREATMENT FACILITY
 Works: 5863
 Period: 01/01/2021 to 12/01/2021

Facility Works Number:
 Facility Name: *RENFREW WASTEWATER TREATMENT FACILITY*
 Facility Owner: *Municipality: The Corporation of the Town of Renfrew*
 Facility Classification: *Class 3 Wastewater Treatment*
 Receiver: *Bonnechere River*
 Service Population:
 Total Design Capacity: *9500.0 m³/day*
 Period Being Reported: 01/01/2021 12/01/2021

Note: all parameters in this report will be derived from the Bslq Station

Month	Total Sludge Hauled (m3)	Avg. Total Solids (mg/L)	Avg. Volatile Solids (mg/L)	Avg. Total Phosphorus (mg/L)	Ammonia (mg/L)	Nitrate (mg/L)	Nitrite (mg/L)	TKN (mg/L)	Ammonia + Nitrate (mg/L)	Potassium (mg/L)
Site	RENFREW WASTEWATER TREATMENT FACILITY									
Station	Bslq Station only
